

Alesis HR-16 Patch Bay Drilling Template

Print this template at 100%, cut out the gray area, and place it over the top of your HR-16 case. (I scraped off the HR-16 cheat sheet first, which left a sticky surface that gripped the template well.) You can remove the flap by bending it gently until the hinge pin pops out.

Remove the top of the HR-16 case. Remove the sliders. Remove the display if desired (I just covered the back with masking tape). Line up a punch with each hole and tap it with a hammer to make a dimple for the drill bit. I used a 5/32" bit and 8-32 x 3/8" machine screws.
